THE SEARCH IS OVER.

You've finally found the right OCR product for NetDocuments: Symphony OCR.

Did you know that image-based content (PDF, TIFF and MSG files) will not appear in keyword search results? People often spend too much time searching for these types of files unsuccessfully. However, there is a solution. By combining Symphony OCR with NetDocuments' robust enterprise search capabilities, you'll be assured ALL of your documents will be text searchable and at your fingertips in seconds.

Trumpet has created the only product that automatically makes these pesky files text-searchable by any key word or phrase - regardless of how it was saved or when it was saved.

FIND DOCUMENTS

Use any keyword or phrase to search every file in NetDocuments and always find the files you need.

FORGET THE FORMAT

It doesn't matter where your documents come from - e-mail, e-mail attachments, e-fax, scanner, USB drive - as long as they are in NetDocuments, they are automatically OCR'd.

PRESERVE CONTENT

OCR does not impact the original file; it preserves PDF annotations, Bates numbers, bookmarks, and other formatting.

SAVE TIME

Since files are automatically processed, you're free to focus on other tasks. What will you accomplish with a little extra time in your day?

The search is over. Symphony OCR is here sales@trumpetinc.com

THE POWER OF SYMPHONY OCR

- OCR stands for Optical Character Recognition.
- Makes all image-based documents text searchable.
- Allows you to select, copy and paste text.
- Automatically OCRs documents once saved to NetDocuments.
- Continually checks for new documents to be OCR'd.
- Symphony OCR is powered by ABBYY FineReader® OCR engine.
